Code review form

		Yes/No	Notes
1	Does the code run? Run without errors (logical) Input validated?	Yes	
2	Are all requirements/specifications for the code met?	Yes	
3	Did author plan code? Pseudocode? Flowchart?	Yes	
4	Are data types used correctly? Does the application correctly convert between types if/when needed?	Yes	
5	Variables are used and named appropriately? Descriptive / meaningful Uses camelCase	Yes	
6	Is the code readable/understandable? Is the code indented appropriately? Are the comments adequate/appropriate?	Yes	
7	Methods are used and named appropriately? Apply DRY principle. Does one function	Yes	
8	Are Classes modeled appropriately? Properties are appropriate? Class methods appropriate?	Yes	
9	Are appropriate data structures used for storing/processing data? List, Map, Set, etc.	Yes	
10	Is the code built using MVC structure?	Yes	
11	Can the author explain Dependency Injection? (DI) Can they explain how DI is implemented in their application?	Yes	
12	Are exceptions handled? Good use of try/catch/finally blocks Do they show too much information when thrown? Are the appropriate exceptions caught? Do custom exceptions respond appropriately?	Yes	
13	Is there a service layer? Does the service layer contain only business logic? Is the author able to explain the importance of the service layer?		
14	Is there testing for the code? Can the author explain stateful / stateless testing?	Yes	

Is there adequate testing coverage?

Is the Service layer tested?

Are the DAOs tested?

15 **Does the application use Lambdas and streams correctly?**

Yes

16 **Are the IO/CRUD operations performed correctly?**

Yes

Is appropriate data returned in appropriate format?

17 **Is author able to explain foundational elements of the Java language?**

Yes

Abstraction, inheritance, polymorphism, encapsulation?

Can author explain how / why they coded a solution the way they did?
